LIVING COSTS OF 187 ALABAMA FARM HOMES

Partie the latter ages of June 1984. Fr. Eitheat tiek ande

Freed # 2

tus na mile sectional

Cladian lavesti.

(As estimated from a study of surveys made by four county home demonstration agents, January 1924).

How the Survey Was Made

In the fall of 1923, Dr. C. B. Smith, of the United States
Department of Agriculture, wrote to the Extension Directors in a limited
number of States, of the possibility of securing the services of Dr. E.L.
Kirkpatrick, of the Department of Agricultural Economics of the Department
of Agriculture, in assisting the State Home Demonstration Service in making
a survey of living costs in a limited number of farm homes.

Hardly realizing what the scope of this survey was, or what it might mean to the Extension Service, but with an appreciation of the value of the work which had been done in Livingston County, New York, by Dr. Kirkpatrick, the offer of cooperation was most gratefully accepted, and the following plans made for making the survey:

Following the annual meeting of agents in December 1923, each district agent requested one of her best trained home demonstration agents to remain over for a two-day course in survey making, with Dr. Kirk-patrick as instructor.

willing at the survey in the increment officiency of the home decomposymetrics

One hundred and ninety-two surveys were made by these agents as follows:

Tam Multage and

Was so Collegion

the exiltantion of

40 by Miss Ruth Whorton (Lee County)

52 by Miss Charlotte Busey (Pike County)

50 by Miss Gladys McCain (Coosa County)

50 by Miss Evelyn Peyton (Madison County)

These surveys were made in January 1924 and immediately sent in to Dr. Kirkpatrick, who found 187 of them satisfactory.

During the latter part of June 1924, Dr. Kirkpatrick made a preliminary report of the work at the National Home Economics Association, illustrating the report with charts made by the United States Department of Agriculture, and in September 1924 Dr. Kirkpatrick sent to the Alabama Extension Service copies of a mimeographed report, a copy of which is attached.

In April 1924, at the Alabama Conference of Social Work,

Miss Buth Whorton, of Lee County, made a report of the Lee County Survey.

Dr. Joseph K. Hart, of the Russell-Sage Foundation, after listening to Miss Whorton's report, stated;

"It is such work as Miss Whorton has reported that makes it possible to envisage the life of the people for whom we are working."

He also stated that he believed extension agents were "laying foundations of civilization in this daily work of improving the home life of the people on the farms."

In handling the material on its way from the county home demonstration agents to Dr. Kirkpatrick, and in seeing the results of the making of the survey in the increased efficiency of the home demonstration agents, the State Home Demonstration Agent realized the necessity for doing first-hand work in getting more complete data from the schedules than it was possible for Dr. Kirkpatrick to do at his office. Dr. Benjamin Andrews, of Teachers! College, Columbia University, offered, in the summer session of 1924 a six-point research course for graduate students, which included an opportunity to use available survey material and at the same time to study research methods and methods of utilizing data secured from surveys and similar investigational work. Dr. Kirkpatrick leaned the Alabama schedules to the State Home Demonstration Agent for the 6 weeks she was at Columbia. During this time, she made tabulations; studied trends in expenditures in relation to income, studied reports of similar work which had been done in other States, and in other countries, and made plans for the utilization of

the survey data in making plans for Alabama home economics extension work in 1925. This experience gave her faith in the data secured and made her appreciate the value of similar surveys as a basis for program making in future years.

As a result of the work done by the State Home Demonstration Agent, a plan was worked out with Dr. Kirkpatrick to make a survey of ten farm homes in each county in Alabama in which a home demonstration agent was employed.

During the time the State Home Demonstration Agent was working with the surveys in New York, she planned in a general way the program for the annual meeting of Alabama farm and extension people which was held the last of December 1924, at which time the program for standardizing Alabama farm homes was made. A copy of this program is attached.

The tabulations made by the State Home Demonstration Agent and by Miss Pearl Jones, a former home demonstration agent in Alabama, and a few of those made by Dr. Kirkpatrick, are included in this report.

The Counties Selected

The counties were selected with the idea that each should represent a different type of agriculture and of economic conditions in the State and should be located in four sections of the State. They were as follows:

Coosa County - the galue of land per acre and the average value of crops made as represented by the 1920 census, were both among the lowest in the State. The only railroad in the county is a short one across one corner.

Lee County - the county in which the Alabama Polytechnic Institute is located, which is fairly typical of the Black Belt, and in

Sheet # 4

which the expenditures for living costs were found to be greater than in any other of the/counties surveyed.

Madison County - a North Alabama county in which economic conditions are about on a par with those of Lee County, in which the reads are excellent, the climate more invigorating, the farms smaller, and the number of white population per square mile, greater. The average living costs for white families was somewhat less than that in Lee.

Pike County - a county typical of Southern Alabama in which the county roads are fairly good. The plantation system still prevails in this county and living conditions are not unlike those of Lee County.

Division of Farm Families by Income Groups

Dr. Kirkpatrick found that the average total expenditures for; rent, furniture and furnishings, operating expenses of the home and clothing, maintenance of health, advancement and food for the family of the 187 families in which the surveys were completed, fell into five income groups as follows:

110 033	9	e meni	排航 音	\$434 J. 75	AME AME		umber of		Percent of total	
Group	A	less	tha	\$1000		ng 18 salahanan 18 salahan mendalah	57	Strategy (1875)	30.5	el apolicae an
16	C	\$1,500	to			260 K2102 A 3 H24 K4 C 2 K3	57 36		30.5 19.2	
i î	E	\$2000	to	\$2999	I take Kua	TE TARRES T	18 5 5	riis sa alba, ile sa	9.6 2.7	and the factor
a.	J	\$3000	and	over	nly bbe s	umintha a	14		7.5	

Because of the small number in groups E and F, the State
Home Demonstration Agent combined these two groups, having group E with 19
families, making 10.2% of the total number.

The above table gives the gross income which includes all products, food, fuel, etc., furnished by the farm, and all materials bought with cash from the farm income.

The home demonstration agent in conference with the operator and his wife, made the estimate of the money value of the furnished products using the average cost price in the nearest local market.

The following table indicates the portion of the income for each group which was furnished by the farm and the amount of cash apant:

	Income	Furnished by farm	Purchased
r result uze in	Less than \$1000	\$507	\$306-20
os a low, the	\$1000 to \$1499	\$699.50	\$543.30
the form people i	\$1500 to \$1999	\$ 15,0000 \$824.70	\$888.20
D	\$2000 to \$2499	\$1072.30	\$1152.70
there	\$2500 and over	\$1348,20	\$2171.70

The 114 families in groups A and B make up 60% of the farm families on the farms of white people in the State.

The living standards of this 60% of the farm families, which have on an average \$424.75 per year in cash to spend for all living expenditures, evidently exists and a living standard comparable to the group referred to By Dr. Andrews in his book, "Economics of the Household", as living on the "poverty level." Of the farm families in group E, the survey indicates that they have not only the comforts of life, but many of them have luxuries in the home and their children have educational advantages. Alahigh bama has an extraordinaryly/percentage of farm families with an income of \$2500 and over as is indicated by the following table:

	Selected areas in Alabama, 1923			of Iowa, 1923 : :Number of:Percent of				#Selected areas : Selected areas taf Kentucky, 1920: of Texas, 1920							
											Number :Percent A:families:total				
	Total	:		:	1	:		- T :		; ;		-; ;		:	
	187	:		•	451	: :	it i	: :	208	1		i	278	:	
A	57	:	30.5		36	1	7.9	i	17	i	8.2	i	59	•	21.2
3	57	:	30.5	8	174		38.6		59	:	28.3	•	99	•	35.6
C	36	:	19.2	:	137	:	30.4		55	8	26.4	į	84		26.6
D	18		9.6	•	64		14.2		38	:	18.3	:	33		11.9
Ţ	19		10	Lan	40	nd. Tr	8.9	•	39		18.8	•	13		4.7

It is noted from the above table that 60% of Alabama farm people are in the two lower income groups, while in these same income groups in Iowa, there are 46.5 percent; in Kentucky, 36.5 percent, and in Texas, the State most nearly approaching Alabama, in living standards, 56.8 per cent of the farm people are in the two lowest income groups.

In contrast to this report, we find that in the highest income group, there are 10 per cent of Alabama's people, while in Iowa there are only 8.9 per cent and in Texas, only 4.7 per cent; in Kentucky, 18.8 per cent of the farm people have an income of \$2500 or more.

On the following page, we find a table showing the average expenditure by items in the different groups. This table includes all materials purchased and furnished, but does not show the separation of furnished and purchased, with the exception of the item foods

\$

Variations in Living Standards

According to Winslow, the factors which influence expenditure of income are:

Amount
Regularity and Source
Number, age, sex and special requirements of the family heeds and
opportunities for expenditure.

In these studies, no investigation was made as to the amount of family income which was spent in farming operations.

The cotton farmer usually has the greater partt of his income paid in the fall and out of this, he pays his debts which have accumulated during the year. There are other sources of income, such as the sale of dairy and poultry products, vegetables and fruits, and other farm produce, which is gathered and sold intermittently during the year. A large number of the farms have a regular income from dairy and poultry products.

The farm income in Alabama is generally irregular and uncertain and in the case of the 60% of the families who fall in the two lowest income groups, a large percentage of the purchases are made "on time." This limits the purchaser to the goods available at the country stores, or the stores in his vicinity in which credit may be obtained.

The needs for the family and the opportunities for spending money for recreation are limited and the existing standards in clothing, home furmishing and equipment are low.

The cause of unlimited sunlight, air, space and the long season of warm weather, the cost of housing, is less than in other sections of the country.

There was a wide divergance of living standards in the five income groups and the following is a report of the various items in the living standards of groups A and E:

with had paid work for ather house here. The

News November

To their Archesters to

Southern Peolicey Section.

SUMMARY

There were 583 children, 197 of whom were over 20 years old. These men and women had completed 8.6 grades which is 2.3 more than the number of grades completed by the father, and 2.2 more than the number of grades completed by the mother.

The above indicates that the present generation has completed at least two grades more on an average than their parents.

The boys and girls of 18 years of age have on an everage completed 9.8 grades and since some of these are still in college, evidently they will have at least 1.2 grades more of attendance at school than have their brothers and sisters of 19.

The 17 year old boys and girls have completed 8.7 grades or 1 grade more than their 18 year old brothers and sisters.

The above indicates clearly that farm people are making progress in educational standards.

The median of the education of men and women over 20 years of age (but this is exclusive of the parents known as the operators), is 8 grades.

READING OF FARM FAMILIES AS INDICATED BY MAGAZINES AND NEWSPAPERS SUBSCRIBED FOR.

Of the 187 farm families who reported on the living costs of 1923, 10.7 (twenty) reported taking neither a magazine nor a newspaper.

Of the 167 families who subscribed for newspapers and magazines, it was found that:

The average spent per family for newspapers was \$6.50.

The average number of newspapers taken was 1.2.

The newspapers taken were the leading papers in the locality and in the State.

The average amount spent for magazines per family was \$2.70.

The average number of magazines taken per family was 1.9. While there are some of the leading magazines listed, the larger number of magazines read are those which can be procured for less than \$1.50 a year.

Of the 167 families who subscribed for magazines and newspapers, only 104 gave the names of the newspapers and magazines which were subscribed for. The following is a list of these magazines with the number of families reading each magazine:

Farm Women and Field Work

The average farm woman has full time work if she gives her family and home adequate attention and does the work necessary in managing the poultry, the home dairy, and the garden; yet 32.8% of the home-makers on the farms in Alabama work in the fields on an average of 141.4 days per year.

The number of women who work in the field decreases as the income increases as is indicated by the following table:

The House

Estimating the value of the house on the basis of Dr. Kirkpatrick's statistics, we find that it varies in price from \$680.00 on an average for the families in Group A to \$3389.00 on an average in Group E.

The value of the house for the average family has been found to be \$1333 which indicates that the standard of the farmer's house in Alabama is low, as compared with other States and other sections of the country.

6.9% of the Alabama farm homes have running water, although μ 34% of the women answering the questionnaire sent out by the Alabama Extension Service in 1923, desired running water above any other improvement in their farm home.

The Agricultural Engineering Division has estimated that 112 two-gallon buckets of water are used per day in the average farm home and are drawn from a well 30 feet deep and are carried 61 feet. This work is estimated to consume 1 hour of the farm woman's time and in a year to have taken 46 of her working days. In carrying the water, she has walked 100 miles. The above work is equivalent to unloading 22 cars of coal, each 30 tons capacity.

8% of the farm homes have a central lighting system. 13% of the farm homes have sanitary toilets and 65% have toilets which are not sanitary, while 22% have no toilets.

Autumobiles

The automobile is a means of furnishing recreation for the family as well as serving the farm in various farming operations.

There is a question as to the wisdom of owning and operating an automobile when the amount spent for living costs does not exceed \$500.

53.2 percent of the families said that they had had automobiles. The average cost of upkeep for a year was \$223.29. They used on an average of 284 gallons of gasoline per year or 23 gallons per month.

Evidently the farm family of limited income who own automobiles run them economically and certainly the women in the family object to the idea of giving up the automobile.

The following table gives the number of families owning automobiles, cost of operating and the number of gallons of gas used:

County	Families Number	owning	automobiles Percentage	Cost of operating car	Number gallens used.	gas

The following tolice shapes the permettage of families in each group

In Alabama, the long hot season makes a supply of ice, or some method of refrigeration essential for comfortable living standards. The families who must do without ice suffer real hardships. The following table which shows the very small percentage of families using ice, indicates in a measure the lack of comfort in the majority of farm homes:

targer proportion of their incomes.

Conservation of the Conser

The Family and Community

The following table shows the percentage of families in each group who contribute to the church and the average amount contributed by the families of each group. The amount contributed per family per Sunday varies from 15¢ in group A to \$1.27 per family per Sunday in Group E, and in no single group does the amount given for church equal one-tenth of the income. The amount contributed indicates that the large majority of Alabama farm people of the lowest incomes contribute regularly and fairly liberally to the churches.

100% of families of large incomes report church contributions, but they do not give any larger proportion of their incomes.

		Group		Church

The Farm Bureau

From observation one would believe that the more successful farmers were the Farm Bureau members and this study indicates that in group A none of the farmers were members of the Farm Bureau and the percentage in other groups was as follows:

Group	3 12%
8	C
N	D509
- 11	E55%

Furnishings of the Farm Home

While in two-thirds of the homes, we may find little of inspiration and help the families, in at least one-third of the homes we find beauty and art and music. For instance, forty families in 1923 bought musical instruments during the year, the average value of which was \$144.06. The attached table indicates the trend in furnishings as shown by the average amount spent for furniture and furnishings per year. We find the following statistics of interest:

102 families averaged \$223,28 per year on operating autos.

53.2% of the people owned cars

The 102 autos used on an average of 284 gallons of gas per year.

21.8% families owned telephones.

42 families averaged \$10.61 per year for telephones, or 88¢ per month.

40 families bought musical instruments during the year. The average amount spent for musical instruments was \$144.06 per year per family.

Food Habits

The survey statistics indicate that farm families have a better standard for food than for other items represent in living standards.

This in part is a result of the work done by the Extension

Service during the past 15 years and no doubt the statistics on this

item which were made by estimating the amount of produce furnished and

more
the value at an average market price, are MANN likely to be in error than are

XXI any other figures.

Because of the likelihood of mistakes in estimating we are not publishing the statistics on food until we receive the surveys made in January 1925 which we will use as a check.

Attached find tables giving the reported amount of the foods most generally used by the farm family and an estimated week's diet.

In order to have a basis for estimating the adequacy of the diet as reported, Miss Certie Reynolds, Nutrition Specialist of the Alabama Extension Service, made an estimation of the amount of food required for the average family for a week and the following table gives this estimated adequate diet and the diet as reported by the survey statistics:

Week's Food Supply for Farm Family of Average Size

Total 15.296 Perday 2.192

Vegetables in the Diet

In Group A, the amount spent for vegetables and fruits per year, which included the value of the vegetables and fruits produced on the farm, was \$51.02, while in Group E, the amount was \$187.59.

The value of fruits and vegetables per individual ranged from \$13.50 a year, or \$.037 per day per individual in Group A, to \$21.93 per individual a year, or \$36 per day per individual in Group E.

The A Group had an income corresponding to the so-called "poverty group" in New York. The minimum grocery order reported in 1922 by the Association for Improving the Conditions of the Poor in New York, was as follows:

Total amount \$1.40 per week or \$20¢ per day, which is 4¢ per day per individual.

Evidently the amount of fruits and vegetables consumed by 30% of Alabama farm families whose income falls in the minimum income group, is very much the same as that given to the families who live on charity in New York, Although the Alabama families have gardening space available and surplus time and energy, and could with a minimum expenditure of money have an adequate supply of fruits and vegetables in their daily diet.

The following table shows the comparison of vegetables and fruits used by the individuals in Group A and those in Group E and shows that those in Group Espent 37% of their total feed expenditure for fruits and vegetables, while the families in Group A spent only 12% of their feed expenditure for fruits and vegetables.

Your par imarky, and roper on research

on the average \$1.15 per Smile.

The amount speak on toleache did not increase in properties to the income and we again conclude that the varied dist of the farm femilies with larger incomes, tends to lessen the arount of toleache conservals.

Tes. Coffee and Tobacco

Coffee:

Coffee is the beverage universally used by the farm family and they average about a 1b. per week for all families in Group A and from 2 to 3 lb. per week in the families of Group E. The difference in price indicates that the families in Group E use a more expensive quality of coffee. The amount spent for coffee in Group A was \$10.75 peryear and in Group E, the average amount was \$23.83 a year.

The increase in the amount of coffee used is not in proportion to the increase in income and since the proportion of vegetables and fruits and milk increases as the income increases, one judges that this increase lessens the amount of coffee consumed per individual in the farm family.

Tea:

Less than 2% of the families in Group A purchased tea through the year and the families who purchased tea averaged only \$2.00 a year for the tea which they consumed. 21% in Group B and 62% in Group E purchased tea which averaged \$4.36 per family, but taken as a whole, only 36% of the families purchased tea at all during the year and the amount purchased was on the average \$1.50 per family.

Tobacco:

22% of thefamilies reported no tobacco bought. The total amount spent for tobacco by the TST farm families was \$2911.90 or \$19.54 per year per family, who reported tobacco.

The amount spent on tobacco did not increase in preportion to the income and we again conclude that the varied diet of the farm families with larger incomes, tends at lessen the amount of tobacco consumed.

Summary

Taken as a whole, the survey indicates that the average value of food per family per week is from \$10.00 to \$17.00 per family or about 25¢ to 35¢ per individual per day. If the amount of pork and all starchy foods were decreased and milk, fruits, vegetables and poultry products increased, the diet would more nearly meet the requirements of feeding standards as set up by unquestioned authorities on feeding the human family.

will life, in order to mark out practing for improvement on a feel backs, as

to define it more briefly - a surger is a fact tents for see in serving for in-

warming in any amendity life.

Utilization of the Data from the Survey

The real purpose of the study of the living costs of these families is to secure facts to use as a basis for making an Extension program by the State Extension Service.

This has been done particularly well by the Clothing Specialist and the statistics which she compiled on clothing are attached with the program for clothing made out by the Farm Woman's Committee and the clothing budget for a farm woman who has \$50.00 a year clothing allowance.

We had not before realized the limited amount of money available for clothing for farm women and children and the clothing program has been recorganized in order to meet this very certain need.

It is believed that other organizations such as Federated Women's Clubs, League of Women Voters, State Board of Health and the Farm Bureau will find the material available of service to them. Notices which have been given in the press, carrying reports of this work, are attached.

The study has indicated a need for setting up living standards for Alabama farm people. Dr. Shelby Harrison, of the Russell-Sage Foundation, has said "that the survey is a means of recognizing changing conditions and since change means new problems, it is a means of finding out the facts of the community life, in order to work out programs for improvement on a fact basis, or to define it more briefly - a survey is a fact basis for use in working for improvement in our community life."

STARTLING STATISTICS ON FARM WOMEN GIVEN BANKERS BY AUBURN AUTHORITY

Miss Harris Says Helpmates Do Equivalent in Work of Unloading 22 Cars of Coal in 46 Working Days

len Harris, dean of women and state home demonstration agent, Alabama bankers have returned to their homes

bankers have returned to their nomes after their conference, here Fiday.

So impressed were they with what Miss Harris said that they termed it "the meat of the meeting." This term was coined by Ulay W. Black, chairman, and endorsed by the 55 bankers present from 42 counties. Mr. Black present from 42 counties. Mr. Black called the meeting as chairman of the agricultural committee of the Alabama Bankers association.

Miss Harris told the bankers of a cost of living survey conducted by the home demonstration agents in coop-

AUBURN, ALA., Jan. 14.—Special to the Advertiser.—With memories fresh, with facts about the Alabama farm found that 60 per cent of the Alabama farm families have an average of only ment of agriculture in which it was found that 60 per cent of the Alabama farm families have an average of only \$424.75 to spend annually for all living expenses. After making this statement, she said:

"Consider for a moment the problem of paying the operating expenses of the home, necessary expenses in maintaining the health of the family and in clothing, educating and caring for the personal expenditures and saving of a family of four on an average of \$35

"Besides this amount of cash, the farm furnishes a large proportion of the food eaten by the family and in many cases all of the fuel used in the home. By an expenditure of time and better living standards may established which will add considerably to the increased efficiency of the family and will result in an increased income."

Thirty per cent of the farm families were found to have a cash income of approximately \$1,000 per annum and 10 per cent have an income of \$2,500 and over. Such families are able to educate their children and have comforts of life.

The value of the average farm home in Alabama is \$1,300. The survey revealed that only 6.9 per cent have running water although 34 per cent of the farm women who answered the ques-tionnaire said that they desired run-ning water above any other home improvement.

Cost of Dresses Low

The department of agricultural engineering at Auburn has estimated that 11 1-2 two-gallon buckets of water are used per day in the average farm home and are drawn from a well 30 feet deep. This water is carried 61 feet. The work is estimated to consume one hour dally of the farm remarks the hour dally of the farm woman's time and to take a total of 46 of her working days. In carrying this water she has walked 100 miles and has done the work equivalent to unloading 22 cars of coal, each of 30 ton capacity. Certainly for the sake of the farm woman's to have the farm woman and the farm woman and the farm was to the farm woman and the farm was to the farm woman and the farm woman and the farm woman and the farm was to be sake of the farm woman and the farm was to be sake of the farm was the sake of the farm was the sake of the farm was the sake of the s tainly for the sake of the farm woman and for her far greater contribution in the home as a result of less physical

work and strain, should farmers be encouraged to provide running water for their homes.

The survey disclosed that fact that the average farm family dressed on a minimum clothing budget. The average farm woman had \$50 per year for her clothes. The farmer spent more for his clothes than did his wife, and the average boy on the farm spent more on his clothing than did his sis-

It was found that the average father and mother on the farm have com-pleted an average of 6.2 grades and 6.3 preced an average of 6.2 grades and 6.3 grades and there is a very hopeful sign in the statistics which show that the children of these parents over 20 had completed on an average of eight grades and the children of 19 have a still higher average of nine grades. One is concerned, however, when the appears corry the statistics. one is concerned, nowever, when the papers carry the statement that county schools can have only a four months' session for eight months of the year and the growing child in the most formative stages of its life is dependent entirely on the mental inspiration and development which the stages of tion and development available from contact with its family and with the reading material found in the home. Rend Few Papers

As to magazines and newspapers, we found that 10 per cent of our farm people have neither magazines newspapers in their homes and the renewspapers in their homes and the remaining 90 per cent have on an average of 1.2 newspapers and 1.9 magazines. The average cost of the two magazines is \$2.70 a year, which indicates the quality of the magazines. Eighty-seven per cent took farm papers; \$3 per cent took the daily newspapers of their town or county; 40 per cent took women's magazines; 25 per cent took apparatus and apparatus in \$2 per cent years and per cent so women's magazines; 25 per cent years and per cent years and per cent years and years and years and years and years and years and years are years and years and years and years are years and years and years and years and years and years are years and years and years are years and years and years are years and years are years and years and years are years are years and years a

cent general magazines; 19.2 per cent state dailies; 18.3 per cent religious magazines; and three per cent children's magazines.

In connection with this survey, Miss Harris explained the "standard farm home" as defined by a committee of farm women which met with the home demonstration agents and agricultural engineers here late in December. The report of this committee contains recommendations in detail as to what a standard farm house should be and what the food, clothing, reading, recommendations and other social life should be what the food, clothing, reading, recreation, and other social life should be to make it a "standard farm home."

Miss Harris concluded with the statement: "Every farm home should be eco-

ment: Every tarm nome should be eco-nomically sound, mechanically con-venient, physically wholesome, men-tally stimulating, artistically satisfy-ing, spiritually inspiring and founded upon mutual affection and respect."

REPORT OF CLOTHING COMMITTEE

The Clothing Committee of the Standard Farm Home, working with the regular Clothing Committee, begs to submit the following report:

After a careful study of the expenditures for clothing tabulated in the surveys of last year, it was decided to plan a minimum wardrobe for the farm wife on the basis of \$50.00, the average expenditure of 186 wives.

This wardrobe is submitted with number of garments and approximate cost affixed. Suggestions for kind and quality of material are added.

It is suggested:

- (1) That this minimum budget be used as the basis for discussion on the selection of the wife's wardrobe.
- (2) That at least ten women in each county try to plan their wardrobes along these lines.

For assistance in this project, sheets are appended for the woman's convenience, and she is asked to make an inventory of her present wardrobe and enter thruout the year the number and cost of all garments purchased.

It is suggested that the ten women keeping this information, be the same ten who answer the questions in the 1924 survey to be taken in January, and that they report to the agent and the clothing specialist at the end of the year.

Respectfully submitted by the members of the Clothing Committee (sub) of the Standard Farm Home Committee.

Mrs. J. M. Horne (Calhoun)
Mrs. Chas. C. Nance (Lawrence)
Mrs. E. N. McCall (Escambia)
Mrs. Margie Mash (Crenshaw)

(Assisted by the Clothing Committee)

Extension Service County Agency Work

MATERIAL SUITABLE FOR GARMENTS LISTEDU UNDER WARDROBE NEEDS.

(The starred garments are ones which the committee suggest may be made of material on hand, and thus not entered into the budget as money expended)

APRONS: Make the butcher aprons 1 yard of ladelassis cloth, percale, gingham at 25¢ a yard; also of flour sacks at no cost.

HOUSE DRESSES:

4 yards of lad-lassie cloth, percale, gingham at 25¢ a yard. Trim with rick-rack, bias folds of the material, contrasting material, buttons, etc.

AFTERNOON DRESS OF COTTON:

4 yards of tissue gingham, voile, gingham, suiting, Indian head, poplin at 50¢ a yard.

(The committee decided to omit the silk dress, as a good silk is too expensive for this budget, and the afernoon dress can answer the same purpose.).

WOOL DRESS:

Serge, gabardine, wool crepe, flannel at \$2.00 a yard.

(The committee suggests that the farm wife do not purchase separate waist and skirts, as these are not becoming to her. A suit is not suitable in her wardrobe, as the coat to the suit does not look well with her dresses, and she cannot afford both a suit and a coat.)

COAT:

The farm woman should buy a coat workh at least \$25.00. To get the service in wear and appearance which she should from such an expenditure, she should select a coat without a fur collar, or of a rough material like tweed, cut on very simple lines.

EXTRA WRAP FOR GARDENING? MILKING? ETC .:

This may be a sweater at \$2.50 (minimum). It would be better to make a jacket of an old dress, or coat.

HATS:

Velvet for winter hats is not cheap. If a good quality cannot be bough, get velveteen.

Silk should be of good quality; taffeta at \$2.00 to \$2.50 a yard.

Cheap frames do not pay; frames which hold their shape cost from 50¢ up.

SUMMER UNDERWEAR:

This should consist of either knitted union suits at 50¢ each, or sets of either envelop chemise, or shirt and bloomers. Those garments can be made of unbleached domestic at 17¢ a yard, or bleached at 20¢, trimmed with rick-rack, or bias bindings or facings.

SLIP OR PETTICOAT:

UNBLeached or bleached domestic at 20¢, 2½ yds.

WINTER UNDERWEAR:

Knitted unionsuits with long sleeves and legs, at \$1.00.

WINTER SLIP OR PETTICOAT:

Of sateen at 50¢ a yard, or of an old serge or wool jersey dress with a sateen comisole top.

NIGHTGOWNS:

Pajama check or long-cloth at 25¢ a yard, unbleached domestic or bleached at 20¢. Three yards.

BRASSIERES:

These can be made from the scraps left from the undergarments. Straps made of the material will wear better than tape. Hooks and eyes bought on tape will save time.

KUMONA:

Every farm woman needs a warm kimona for cold nights in case of illness or care for the baby. It should be of flannellette at 50¢ a yard made with the fleece side in. If a wool kimona can be bought, albatross at about \$1.25 a yard makes a light warm covering. 3 yds.

STOCKLEGGA

If a woman works in the field, she will find the Georgia Knot most satisfactory. They are two pair for 25¢. Lisle stockings at 50¢ and silk at \$1.50 should be at least half fashioned.

SHOES:

The famm woman should have two pairs of working shoes and one pair of dress shoes. She should pay enough so that the shoe will wear well, hold its shape, and be of good material. Keep dress shoew in shoe trees.

SHOE REBRIRING :

This can be done at home. If a pair of shoes will not stand half soling and re-heeling, they should never have been bought. Shoes should be half soled before the sole is worn completely through to save the shoe and the stockingsn Heels should be built up with rubber heels before they are run over.

MISCELLANEOUS:

This includes handkerchiefs, garters, handbags, umbrellas, gasoline for cleaning, etc.

The wool dress and coat should be thoroughly cleaned at least once a year.

REVEALED BY THE CLOTHING SURVEY

By Josephine F. Eddy

Last year Dr. E. L. Kirkpatrick of the Bureau of Rural Economics, asked that Alabama be one of the states to make a living cost survey to determine the standard of living in this State for home demonstration agents. One home demonstration agent in each district, was asked to remain after the annual meeting and discuss the survey with Dr. Kirkpatrick.

Miss Peyton of Madison, Miss 'McCain of Coosa, Miss Whorton of Lee, and Miss Busey of Pike spent the month of January visiting families in their counties and finding out their expenditures for the year 1922-1923. As a result of this work, we have data from 187 Alabama families including all classes and sizes of farmers and farms.

This survey revealed some very interesting facts in regard to living conditions. It enabled us to make a detailed study of the expenditure for clothing per family.

The average annual expenditure per family was \$286.70, being 13.9 per cent of the total expenditure. This is lower than that for Texas, Tennessee, and Kentucky families where a similar survey was made.

The average individual expenditures were rather startling. Members of the family spent:

The wife	\$50.00
The husband	52.90
Girls over 24	71.00
Boys over 24	101.20
Girls 19-24	
Boys 19-24	92.20
Girls 15-18	70.10
Boys 15-18	57.70
Girls 12-14	48.60
Boys 12-14	32.90
Girls 6-11	28.90
Boys 6-11	26.10
F771	C

The largest single expenditure by a farm woman was \$361.00, the lowest \$2.50. There was only one expenditure over \$300, but three women had spent under \$2.75. Eighteen women had spent over, \$100 for their year's supply of clothing, but 55 women spent less than \$25.

We are not especially interested in those women who spent over \$100 as we know that they can have what they need, although it may not be of the very best quality, or a large number. But it is hard to imagine what a woman can purchase for less than \$2.75 even if she makes all her clothes. The cost of cotton material is not low and yet it is our cheapest material.

The woman who spent \$2.50, bought a pair

of shoes. One woman who spent only \$2.65, bought 2 dresses at \$1.00 each, 2 pairs of stockings for 15c each, and 2 handkerchiefs. Her daughter of 20 spent \$14.25 as follows: 1 apron at 50c, 4 dresses at \$1.00 each, 1 sweater at \$3.00, 4 pairs of stockings at 25c each, 1 pair of shoes at \$3.25. But the woman who bought herself a pair of shoes only spent \$27.00 for her 11-year old daughter.

You will say that this is out of proportion, as it is, but \$27.00 gives the child a meagre wardrobe at best.

Studying the figures in detail after counting the number of garments purchased gives one much food for thought. Of the 186 farm women who furnished data, 95 percent bought shoes for an average of \$4.10 a pair with an average of only 2.2 pairs per woman. Can you think of two pairs of \$4.00 shoes giving good service for a whole year? Could they last for more than a year? If not, what is the other 5 percent doing for shoes?

The item of wraps is a more serious one. Alabama is not such a warm state that women can go the whole year without a wrap of any kind. Yet only 34 percent purchased sweaters which averaged \$4.22 each. Only 16 percent bought coats at an average cost of \$26.81, and 11 percent bought suits at an average cost of \$20.00. This looks as if there was over a "wrap around," but 87 women or 41 percent purchased no wrap whatever. Of course these women probably had some sort of sweater or coat left from the year before, and how well does a \$26.00 coat or a \$20.00 suit look the second year. Many paid less than the average cost!

The matter of underwear is serious for both men and women, as the average is only a little over 2 garments per person purchasing, and the number purchasing ran as low as 50 percent for summer and 25 percent for winter. What are the others doing for underwear? You know that if you purchase only 2 suits a year you must buy every year, and surely a family does not have enough meal sacks to clothe the entire family in underwear!

We wish to suggest a standard wardrobe for a family below which one loses self-respect, and we hope to use these figures to help us with our list. But we need to know how many garments a person has in one's wardrobe as well as how many one purchases. The cost of a garment is not alone its initial price but that price considered in comparison with the life and appearance of the garment.

REPORT OF COMMITTED ON STANDARD HOMES

We, the Committee on the Standard Home for Alabama people, submit the following report:

- (1) We are not unmindful of the importance of the income as a factor in improving living standards but we have not considered any income projects since these are being reported on by other committees in this conference.
- (2) From a study of living costs of 18% farm families of 1924, made cooperatively by the U. S. Department of Agricultural Economics and the Alabama Extension Service, and from more than eight hundred answers made by farm women to a questionnaire sent out by the Alabama Extension Service, the following facts have been found:
- a. That the value of the average alabama farm home is estimated at about \$1300.00. This is less than the value of the average farm home in the majority of the other States.
- b. That only 6.9 percent of Alabama farm homes have running water, although 34 percent of the women answering the questionnaire desired running water above any other improvement. The Agricultural Engineering Division has estimated that $11\frac{1}{2}$ two-gallon buckets of water are used per day in the average farm home and are drawn from a well 30 feet deep and carried 61 feet. This work is estimated to consume one hour of the farm woman's time and in a year to have taken 46 of her working days. In carrying the water she has walked 100 miles. The above work is equivalent to unloading twenty-two cars of coal, each of 30 tons capacity.
- o. That only eight percent of the farm homes have a central lighting system.
- d. That approximately 13 percent of the farm homes have sanitary toilets. Sixty-five percent have toilets which are not sanitary and 22 percent have no toilets.
- e. That the average number of grades completed by the farmer is 5.2: by the farm mother, 6.3.
- $\underline{\mathbf{f}}_{ullet}$. That ten percent of our farm families take no magazines or papers.

Since the above statistics indicate that there is a need for a State-wide improvement in farm home living standards, and since the place of the farm home in agricultural life and in the building of citizenship has been recognized by all people who have given this subject consideration, and:

Since agricultural progress will be no greater than the progress made in the development of farm home life, be it resolved:

That this conference go on record as endorsing the plan of having farm people in every community make a study of farm homes and farm home life and use the facts found as the basis for a program of work which will bring up to standard a larger percentage of homes and will offer suggestions and assistance for further improving the home life of those families who have attained an approved living standard.

And be it resolved further that the following standards for Alabama homes and home life be adopted:

HEALTH FOODS

HOUSING CLOTHING

FURNISHING EDUCATION

RECREATION

HEALTH COMMITTEE

We, the Committee on Health for the Standard Farm Home, recommend:

- (1) A physical examination for every member of the family once a year and a dental examination every six months.
- (2) Sanitary equipment in every farm home, every outside opening in the house screened with a 16-mesh screen and an efficient sewerage disposal system or sanitary toilet.
- (3) All quarters for Live stock be kept thoroughly cleaned as an aid in destroying the deadly fly.
- (4) All breeding places for mosquitoes be drained or oiled and also that every family cooperate with the State and County Board of Health to attain this end.
- (5) That all rules for personal hygiene by the State Board of Health be carried out.
- (6) Cooperate with health authorities against all contagious or communicable diseases.
 - (7) Have plenty of fresh air in every bed room every night.

Mrs. Grace M. Hough, Chairman

W. S. Fain

Mrs. H. B. Tompkins

Mrs. J. E. Cameron

J. W. Sartain

Ida Brunson

-4-

c. All roofs shall be fire-resisting material.

b. All chimnies and wiring shall be constructed accor-

- \underline{d}_{\bullet} All outside walls shall be protected by storm sheeting and building paper under the weatherboard.
- e. All exterior woodwork shall be given two coats of good grade paint or be protected from decay by refined creosote oil and all beams or sills exposed to dampness shall be creosoted.
- f. All windows shall be double lining with balanced weights and screened into removable screens covering both sashes.
 - g. All doors shall be properly screened.
- h. All other sanitary arrangements recommended by the committee on health shall be included.
- i. The construction shall be such as to make it possible to properly light and ventilate each room.
- All floors and walls shall be constructed or covered so as to be easily cleaned.

(2) Plan of house

ding to the fire underwriters code.

- a. The house shall consist of:
 - 1. Bathroom
 - 2. Kitchen
 - 3. Place for eating other than in the kitchen.
 - 4. Screened porch or other work room.
 - 5. Sleeping quarters to accommodate the size of the

- 6. A place for the social life of the family.
- 7. Storage facilities.
- (1) The bathroom shall be located connecting with the hall to give privacy of access.
- (2) The kitchen shall be as small as possible with sink and running water and shall be equipped to save steps.
- (3) The screened porch or work place shall have arrangements for such work as preparing vegetables, canning, caring for milk, etc.
- (4) The place for eating outside of the kitchen may be a breakfast alcove, dining room, a screened porch and shall be directly connecting with the kitchen.
- (5) The skeping quarters shall correspond with the size of the family. In the average family, there shall be one bed room for the parents, one room for boys, one room for girls and one spare room or concelled bed in the living room. Particular attention should be given to the lighting and ventilation of bed rooms.
- (6) The place for the social life of the family shall consist of one living room, and living porch. The living room shall have an open fireplace.
- (7) The storage facilities shall consist of one closet for each bed room, a linen closet or other facility for storing goods. A cellar for storage of home-grown vegetables and easy access shall be provided for the attic. Arrangements for laundry work shall be in a room other than the kitchen, preferably in the basement or outside building.

According to this standard, the house must have at least three rooms, a bed room, kitchen and combined living and dining room with a bathroom and two porches.

(3) Attractiveness

To be a satisfactory home, it must be attractive in appearance and all construction shall keep this in view as well as planning for the comfort and convenience of the family.

The committee also recommends that attention be called to certain built-in conveniences as additions to the standard farm home. such as:

Medicine cabinet
Built-in ironing board
Laundry shoot
Wood-box on rollers
Broom closet
Window boxes
Bookcases

Respectfully submitted,

Mrs. John S. Morris, Chairman J. B. Mitchell
Mrs. Louis Whatley
Mrs. F. L. Brown
Mrs. B. C. Scharnagel
Mrs. John Finley

Advisory Committee:

Mr. M. L. Nichols) Agr. Engineering Division, Mr. T.B. Chambers) Auturn, Ala. Miss Greta Gray, Bureau of Home Economics U.S.D.A. (Washington, D.C.)

FURNITURE AND HOUSE FURNISHINGS COMMITTEE

We, the Committee on Furniture and House Furnishings, for the Standard Farm Home, recommend the following:

- (1) That the standard farm home shall have only such furnishings as are useful or ornamental.
- (2) That the floors and walls shall be covered or finished in such a way that they will be attractive and easily cleaned.
- (3) That the furniture shall harmonize with the floors and walls and that the farm families be encouraged to make part of their furniture wherever possible.
- (4) That all working surfaces shall be made the proper height of the person who uses them most.
 - (5) That every home shall have a few good pictures.
- (6) That ample storage space shall be provided for clothing, equipment and household supplies.
- (7) That as many labor-saving devices and as much labor-saving equipment be provided as possible.
- (8) That each home shall be furnished in a way that will meet the needs of the incividuals making up the home.

Respectfully submitted.

Martha McCall, Chairman Miss Sarah King Mrs. A. W. Meadows Mrs. M. A. Haynes Mrs. A. L. Nabors

FOODS

We, the sub-committee on foods for the Standard Farm Home, recommend the following:

o (,

(1) Vegetables and fruits

- a. That each family serve leafy vegetables at least four times a week.
- 5. That one fresh fruit or raw vegetable be served each day.

(2) Milk

a. That the family serve a quart of milk a day for each growing child, and at least a pint a day for every other individual.

(3) Meat

a. That each family serve meat, fish or eggs daily and the committee urges that meat be served only once a day.

Pearl B. Crawford, Chairman Mr. Williamson
Mr. Goldsmith
Mr. Gresham
Mrs. Phillips
Mrs. Dozier

REPORT OF CLOTHING COMMITTEE

The Clothing Committee of the Standard Farm Home, working with the regular Clothing Committee, begs to submit the following report:

After a careful study of the expenditures for clothing tabulated in the surveys of last year, it was decided to plan a minimum wardrobe for the form wife on the basis of $\psi50.00$, the average expenditure of 185 wives.

This wardrobe is submitted with number of garments and approximate cost affixed. Suggestions for king and quality of material are added.

It is suggested:

- (1) That this minimum budget be used as the basis for discussion on the selection of the wife's wardrobe.
- (2) That at least ten women in each county try to plan their wardrobes along these lines.

For assistance in this project, sheets are appended for the woman's convenience, and she is asked to make an inventory of her present wardrobe and enter throughout the year the number and cost of all garments purchased.

It is suggested that the ten women keeping this information, be the same ten who answer the questions in the 1924 survey to be taken in Junuary, and that they report to the agent and the clothing specialist at the end of the year.

Respectfully submitted by the members of the Clothing Sub-Committee of the Standard Farm Home Committee:

Mrs. J. M. Horne (Calhoun)
Mrs. Chas. C. Nance (Lowrence)
Mrs. E. N. McCall (Escambia)
Mrs. Margie Mash (Crenshaw)
(Assisted by the Clothing Committee)

We, the Sub-Committee on Education, since studying statistics made from the survey of 187 farm homes in Alabama, in which it was found that the average number of grades which had been completed by the farmers of Alabama was not more than six, and that only fifteen of the 187 farmers had had a college education, be it resolved that this committee recommends:

(a) That all farm boys and girls complete the high school course.

. . .

- (b) That all farm boys and girls be given a college education who never possible.
- (c) That in each farm home there may be made available and read by the members of the farm family, the following literature:
 - 1 county paper
 - 1 standard caily paper
 - 1 standard farm magazine
 - A women's magazine
 - A child's magazine
 - 1 religious magazine or pager of their choice
- (d) That the home life be such that every individual in the family will have a maximum development physically, mentally, morally and spiritually.

Respectfully submitted:

Mrs. Mabel Feag in, Chairman C. C. Miller, Secretary.

Mrs. N. H. Brown

Mrs. Dora Tyndall

Mrs. W. S. Fair

Mrs. H. W. McCafferty

Mrs. J. V. Sartain

Mr. J. S. Kernachan

Mr. V. D. Wood

er 14 c

RECREATION

We, the Committee on Recreation for the Standard Farm Home, recommend that the home be a social center in which instrumental and vocal music, reading habits, radio, pleasant conversation at meals, games in the home, outside sports, and social gatherings be encouraged and made important factors.

Stelle Harms, Chairman
Mrs. M. F. Skehan
Mrs. Cliffie Ray
Mrs. J. E. Witherington
Miss Margaret Ambrose
Mrs. E. E. Ray

HOME GROUNDS

The committee recommends that there be an attractive home setting in harmony with the house. This includes the planting of grasses, shrubbery, flowers, and other plants which not only beautify the surroundings, but eliminate the labor of constant yard sweeping.

Respectfully submitted by the twenty farm men and women and the 10 extension workers whose names appear on sub-committees.

Agnes Ellen Harris, Chairman.
