Prepare whipped topping mix according to package directions. Combine whipped topping and peaches in container of electric blender; process until smooth. Spoon into 4 serving dishes, and freeze 2 to 3 hours or until firm. Remove from freezer 5 minutes before serving.

Peaches are nutritious and appetizing. Deep yellow *Alabama* peaches are rich in vitamin A. One medium-size peach contains 35 calories. Peel fresh peaches just before serving. Coat with lemon juice or fruit freeze powder to prevent browning.

LATTICE LACED PEACH COBBLER

- 8 cups peeled, sliced *Alabama* peaches
- 2 cups sugar
- 1½ cups water
- ¼ tsp. ground nutmeg
- 2 ½ cups biscuit mix
- 3 tbsp. sugar

Turn dough out on a floured surface and knead gently 5-8 times. Roll dough out to 1/8 inch thickness and cut into ½ inch wide strips with a knife or pastry wheel. Place strips on top of fruit in a lattice design. Sprinkle top with 1/4 c sugar mixed with the cinnamon. Dot with remaining butter. The National Association of State Departments of Agriculture (NASDA) is a nonprofit, nonpolitical organization comprised of the 50 State Departments of Agriculture. NASDA and USDA-NASS have a cooperative agreement for NASDA to employ enumerators in the collection of agricultural statistics. Without the help of the enumerators, the presentation of statistics in this bulletin would not be possible. The Alabama Agricultural Statistics Service gratefully acknowledges the work and integrity of its NASDA enumerators.

We are pleased to present the 2001 edition of *Alabama Agricultural Statistics*. Agriculture is the state's leading industry with farm gate receipts just under \$5 billion. The total economic impact of agriculture and forestry to the state is even greater generating over \$40 billion in activity. This includes production, inputs, processing, equipment manufacturing, distribution, wood products manufacturing, and retail sales of the food, fiber, and wood products.

The commodity spotlight on this year's bulletin cover is the peach industry. A state favorite with fresh supplies from spring through summer, Alabama peaches are excellent in quality and can be found at roadside stands and supermarkets throughout the state. In 2000, Alabama producers tallied \$5.3 million in cash receipts ranking 14th Nationally. Several delicious recipes are included on the inside cover.

I hope you find the information included in this bulletin interesting and informative. The numbers represent a dynamic agricultural industry we are very proud of. Your Department of Agriculture and Industries works closely with all of the commodities represented on these pages. It is important to know the size and scope of our industry and we are thankful to the many farmers and agribusinesses who made this publication possible.

Charles Bishop
Commissioner

Alabama agriculture continues to *COUNT!* This bulletin is a compilation of production, inventory, and economic information for the state's leading industry. The Alabama Agricultural Statistics Service contacts farmers and agribusinesses to collect the latest information available for agriculture. Farm organizations, elected officials, universities, farmers themselves, and countless others rely on this information on a regular basis. The results are available immediately following the surveys and can be found at our web site www.aces.edu/dept/nass/. You can also receive the results free of charge by contacting our office at 1-800-832-4181.

Many people are responsible for making this bulletin possible. First and foremost, my sincere appreciation goes out to the many Alabama producers who voluntarily report on our surveys. I also thank the Alabama Department of Agriculture and Industries for funding the bulletin and the Alabama Farmer's Federation for providing the cover. Finally, a special thanks to our corps of enumerators who collect the information and to my office staff for their dedication and work to compile the statistics.

The Alabama crop year for 2000 will be remembered for the prolonged hot and dry weather over much of the state. The season began with short topsoil moisture supplies in North Alabama and very short supplies in southern counties. Crop year 1999 was also dry which further hampered the 2000 planting season. Spring planting of corn and cotton lagged behind normal due to lack of moisture even though several counties received scattered showers. During April 2000, Central and South Alabama crops were desperate for water. Vanessa Hepburn, Montgomery County horticulture agent, said, "the lack of water all but stopped the unirrigated planting of tomatoes, watermelons, cantaloupes, sweet corn and peas." Cotton farmer, Harry Noble said, "a lot of folks quit planting because there was not enough moisture." During June, cotton growers in North and Central Alabama received adequate showers to improve cotton growth. However, cotton plants in South Alabama were hampered by prolonged drought conditions and some early blooming began. Several fields in counties such as Henry, Geneva, Dale, Houston, and Coffee did not even receive enough moisture for plant emergence. Cotton planted acreage for 2000 was 590,000 acres. Harvested area was 530,000 acres, with 60,000 acres abandoned mainly because of the drought. Peanuts were also stressed for water as the Wiregrass region received roughly one-third to one-half of normal annual precipitation. On June 9, peanut condition was rated 86 percent very poor to poor. Peanut farmers planted 190,000 acres, and harvested 182,000 acres. Abandonment of 8,000 acres was much above the normal abandonment of 1,000 or so acres. Yields varied across the region with an average of 1,420 pounds per acre, one-third less than normal. Peanut production was recorded as the smallest since 1980. Early planted soybeans yielded a fair to good crop, but late beans faced extremely dry conditions throughout the growing season. Some soybean producers harvested their crop for hay because of the drought. Overall, soybean yield was reported at 18 bushels per acre, 2 bushels above last year. As the drought worsened, cattle producers were scrambling to find enough hay to supplement dried-up pastures. Only 720,000 acres of hay were cut this year with an average yield of 1.8 tons per acre, well below the 2 plus ton averages in normal years. The 2000 peach crop produced 14 million pounds, compared with 20 million in 1999. Gary Gray, Extension Agent in Chilton County, said "peach trees can take more dry weather than vegetable and row crops and the county has a fair amount of irrigation." Pecan condition was fair to good with production of 15 million pounds, up 15 percent from the previous year.

1/ Marketing year average prices are weighted prices for commodities sold during the marketing year. They represent average prices received by farmers at point of first sale for all grades and qualities. 2/ Estimates are for market eggs only.

A LOOK AT ALABAMA FARM PRICES - THE PAST DECADE

2000 Prices as a Percent of 1991 Prices

Prices received for most commodities sold by Alabama farmers during the 2000 marketing year were below a decade ago. In fact, current prices are at their lowest level in 10 years for many Alabama crops - in some cases even 20 years. At the same time, the U.S. Prices Paid Index, which measures the average cost of inputs purchased by farmers to produce commodities, has increased about 25% since 1990.

Tim Placke

Farm Cash Receipts: Farm receipts for 2000 declined to \$3.89 billion, 6 percent below the record receipts for 1999. This includes receipts for crops, livestock and poultry, government payments, farm forest products, and other farm related income such as custom work. Total farm and forestry receipts, including non-farm commercial timber, fell 4 percent to \$4.59 billion.

Broilers, the largest individual commodity in Alabama's total receipts, totaled \$1.75 billion, down 7 percent from the previous years' record return. Cattle receipts were up 15 percent totaling \$476.3 million as prices continued to increase. Receipts for all eggs totaled \$259.6 million, up 3 percent from the previous year. Catfish sales totaled a record \$81.6 million to push ahead of peanuts as one of the top five farm commodities for cash receipts. Receipts for hogs increased 30 percent to \$39.1 million. Total livestock and poultry receipts, at \$2.68 billion, were 2 percent below 1999 receipts.

Alabama cotton receipts totaled \$146.2 million, an 8 percent drop from 1999. Greenhouse, sod, and nursery sales continued their steady increase totaling \$230.0 million, up 4 percent from the previous year. Peanut returns dropped 40 percent to \$71.6 million. A combination of lower acreage, price received and sharply reduced yields contributed to the decline. Corn receipts decreased 26 percent, and soybean receipts fell by 32 percent. Total crop receipts were \$588.4 million, down 11 percent from 1999.

Cash Receipts by County: For counties with limited production of a specific commodity, cash receipts for that commodity are not published, but are included in the county's Total Farm Receipts.

Definitions: The definitions below will be helpful in interpreting the information on the following pages.

Cash Receipts: Sales of agricultural commodities at the first point of sale by establishments (farms) from which \$1,000 or more of agricultural products were or would normally be sold during the year. Cash receipts include sales of commodities regardless of year produced. They exclude non-monetary transactions such as on-farm use of agricultural commodities.

Government Payments: Includes cash payments for feed grains, wheat, and cotton, amounts paid under agricultural and conservation programs, and miscellaneous payments under programs such as Rural Clean Water and Disaster. The Farm Service Agency (FSA) supplied the information.

Farm Forest Products: Stumpage revenue from sales of forest products from farms. These data and non-farm timber sales by county were provided by the Alabama Forestry Commission.

Non-farm Commercial Timber: Stumpage revenue from sales of forest products taken from other private, (non-farm) forest industry and government owned lands.

Other Farm Income: Includes machine hire and custom work, custom feeding fees, and other farm business-related income. In the county tables, these receipts are not published separately but are included in each county's Total Farm Receipts.

Value of Production: Crop value is derived by multiplying production by the season average price received by farmers. Value of production for livestock and poultry reflects inventory value. It is derived by multiplying the number of head by the average value per head. Value of production is shown in other sections of the bulletin.
