TABLE OF CONTENTS

FOREWORD.....1

TABLES

Daily Maximum, Minimum, and Mean Temperature.....2-13 ✓
Precipitation.....2-13
Solar Radiation.....2-13
Evaporation and Wind Movement.....2-13
Monthly and Annual Average Temperature and Precipitation,
1855 - 1952.....14
Monthly and Annual Average Evaporation, ~~1947 - 1950 &~~
1964 - 1972.....14
Six Hourly Temperature and Relative Humidity.....15-26
Soil Temperature, Wind Direction and Speed.....27-38
Duration in Hours and Tenths of Hours that the Temperature
was 32F or Lower.....39
Cooling Degree Days - Base 75F.....40
Heating Degree Days - Base 65F.....41
Time of Sunrise.....42
Time of Sunset.....43
Growing Degree Days - Base 40F.....44
Growing Degree Days - Base 45F.....45
Growing Degree Days - Base 50F.....46
Precipitation Accumulation and Departure from Average.....47

Except for the long term averages of temperature, precipitation, and evaporation, data in this publication were recorded at the National Weather Service micrometeorology station located at the south end of the Agronomy Farm at Auburn University. The station was established during September 1963 with the cooperation of the Auburn University Agricultural Experiment Station and the Agronomy and Soils Department. The current Cooperative Weather Observer is Mr. Jack Jones, foreman of the Agronomy Farm.

Soil temperatures and evaporation readings are for a 24-hour period ending at 8:00 AM for the day indicated. All other readings are for a 24-hour period from midnight to midnight for the indicated date.

Soil elements of the
The ~~sensing elements~~ *of the* soil thermometers are under bare soil while all other instruments are exposed over sod.

Evaporation is measured in the National Weather Service Class "A" pan of 4 foot diameter.

Unless otherwise indicated, units in this publication are as follows:

- Temperature in °F
- Relative humidity as a percentage
- Wind speed in miles per day
- Solar radiation in langley (gram calorie/sq. cm.)
- Precipitation and evaporation in inches

Cooling degree days are used in computing air conditioning requirements. The "base" for such computations is the mean daily temperature of 75F. These data are obtained by subtracting 75F from the mean daily temperatures, if the latter is above 75F. A day with a mean temperature of 76F is one degree day. If the daily mean temperature continues above 75F for any length of time, air conditioning or cooling will be required for human comfort.

Heating degree days are used in computing fuel requirements. The "base" for computing heating degree days is a mean temperature of 65F. A mean daily temperature of 64F is one degree day. If the daily mean temperature continues below 65F for any length of time, heating will be necessary for human comfort.

Sunrise and sunset are considered to occur when the upper edge of the disk of the sun appears to be exactly on the horizon, with normal atmospheric conditions, and at zero elevation above the earth's surface in a level region. Times of sunrise and sunset shown in this publication are valid for the remainder of the 20th century.

Growing degree days were computed daily by averaging the maximum and minimum temperatures and then subtracting the "base" temperatures of 40, 45, and 50F.

Sunrise and sunset are considered to occur when the upper edge of the disk of the sun appears to be exactly on the horizon, with normal atmospheric conditions, and at zero elevation above the earth's surface in a level region. Times of sunrise and sunset shown in the tables are valid for the remainder of the 20th century.
